

Blaine Labs – Recall of RevitaDerm® (benzalkonium chloride)

- On January 27, 2022, [Blaine Labs announced](#) a recall of one lot of [RevitaDerm Wound Care gel](#) to the consumer level because a 1.0 ounce bottle has been found to be contaminated with *Bacillus cereus*.
- The recalled batch was distributed to physician clinics in 2021.

Product Description	NDC	Lot # (Expiration Date)
RevitaDerm (benzalkonium chloride) Wound Care Gel	63347-120-01	BL 2844 (2/19/2023)

- RevitaDerm is an over-the-counter medication used to treat 1st and 2nd degree burns, stasis ulcers, pressure ulcers, diabetic ulcers, lacerations, abrasions, skin tears, surgical incision sites, device insertion sites, graft sites, and donor sites.
- Patients who apply the contaminated product to a wound could develop a skin and soft tissue infection which could lead to serious complications. For non-immunocompromised patients these infections are expected to be less severe and responsive to treatment. However, for the immunocompromised patients and preterm neonates, *Bacillus cereus* can cause life-threatening, invasive infections including wound and blood infections, sepsis, pneumonia, and meningitis.
- To date, Blaine Labs Company has not received any complaints or reports of adverse events related to this recall.
- Patients who have the recalled RevitaDerm Wound Care Gel should stop using the product and return unused product to the dispensing physician. Other RevitaDerm Wound Care products that are not being recalled are available for patients to use.
- Anyone with an existing inventory of the recalled product should stop distribution and quarantine the product immediately.
- Contact Blaine Labs by phone at **1-800-307-8818** or by email at info@blainelabs.com for more information about the recall.
