

# 2020 Preventive Medications

## **Managing your patient's health with preventive medications**

Your patient's pharmacy benefit plan includes special coverage for generic preventive medications. These medications help protect against or manage a medical condition, such as:

- Preventing blood clots and reducing the risk of a stroke
- Preventing heart disease and reducing high blood pressure
- Preventing osteoporosis  
(a disease that leads to an increased risk of bone fracture)

Your patient's health is important. Taking preventive medications can help them avoid serious illness and high healthcare costs.

## Special coverage for generic preventive medications

The drugs on your patient's plan's preventive medications list do not have a deductible. This means they'll pay their copayment/coinsurance or nothing at all, depending on their plan. It can save them money and get the medications they need to help them live a healthier life.

Your patient's plan only offers this special coverage for generic drugs on the preventive medications list. Preventive medications are a group of products in their plan's formulary which tells them what medications their plan covers.

Please note that most medications on the formulary have a deductible, but generic preventive medications do not. To check the cost of any medication, your patient should see their benefit handbook or contact customer service at the phone number on their member ID card.

## Quality drives our decisions

A group of doctors and pharmacists meets often to review medications and suggest coverage under pharmacy benefit plans. They also recommend which medications should be on plan's generic preventive medications list.

---

A list of generic preventive medications begins on the next page. Medications are listed by therapeutic category. Your patient's specific plan may not cover all of the drugs. Please see your patient's plan's formulary for coverage details. Oral and self-injectable Specialty medications are labeled with an SP note and may have limitations based on your patient's plan benefit. For questions on injectable dose forms of preventive medications driven by their healthcare provider, your patient should call the phone number on their member ID card.
